

## Beta 92 Enterprise for Auditors

### Benefits of using Beta 92 [Enterprise]

- [x] Application runs can be easily checked
- [x] Prompt, comprehensive security guidelines checks
- [x] Expanded search criteria provide precise, direct access to logs
- [x] Fast auditing

### Example - some of Beta 92 [Enterprise]'s checking and auditing features

- [x] You need to check and prove enterprise-wide compliance with security guidelines. The central archiving of security-relevant logs in Beta 92 [Enterprise] means all the logs are available to you and you can search through them quickly and precisely for the information you need.
- [x] You're checking that business-critical applications have run correctly over the past 36 months. To do this you need all the information from the log files. Since logs are regularly stored and auditably archived in Beta 92 [Enterprise], all this data is available to you. The particular advantage of this is that all the information from wrap-around logs is available. You can also check the logs automatically and will be automatically informed in case of an important event.

## Improves security and makes auditors' work easier

### How can you check application runs?

To check production runs you need information from various logs. Logs are not always available or retrievable for production runs that were done a long time ago. Wouldn't your work be simpler and more secure if a specialized software solution stored and auditably archived the logs? You'd be able to find the information you need quickly and precisely using special search functions.

### How much time do you have to do security checks?

In order to check how user profiles are actually being used, you need the relevant log information. This data is often only available for a short time before system routines overwrite it, making the backup of logs for audit essential. Wouldn't it be much easier to check security guidelines if all the relevant logs were automatically archived by a proven software solution?

### Beta 92 [Enterprise] - the proven solution for checking, archiving and searching logs

We provide you with a solution that makes working with logs much easier and more secure. Comprehensive search criteria help you to do audits quickly and precisely. The storage of log generations also lets you make quick comparisons and analyses and check a problem fix at a glance. Beta 92 [Enterprise] is a software solution used worldwide for comprehensive log management. This software has proven its worth over the years in data center operations in your enterprise too. In its current version, this solution can now also be used for SAP, Windows and UNIX systems, supplying you with a central archive for all relevant logs.

## Highlights

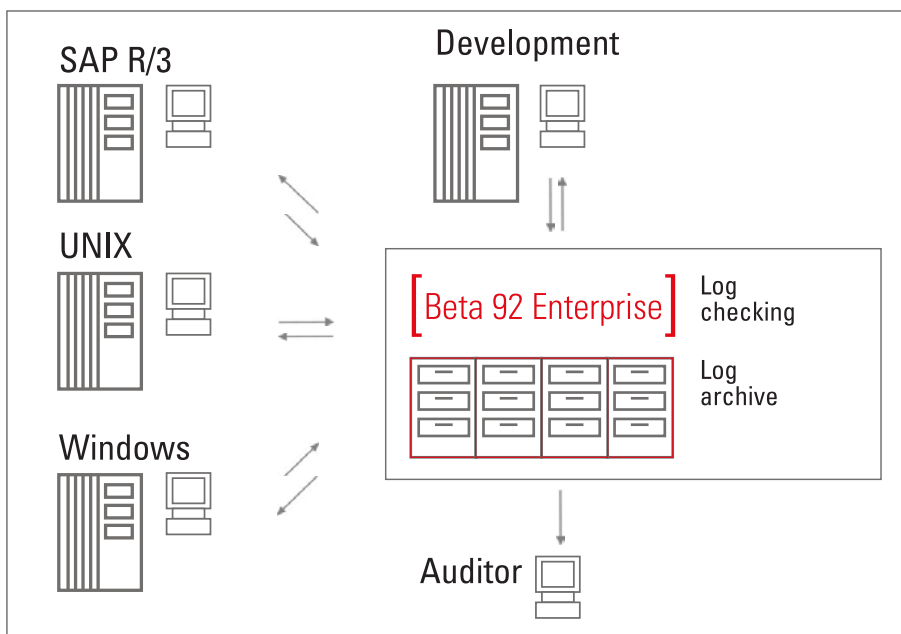

- [x] Automatic log checking during reading in
- [x] Log generations are backed up for subsequent checking and auditing
- [x] Targeted retrieval of archived logs via search criteria and indices
- [x] Access to archived logs via a Java-based interface from every work station throughout the enterprise

## Uses existing resources in the data center

Beta 92 [Enterprise] lets you use existing z/OS data center infrastructure where you already have sufficient computing and archiving capacity and established work processes and experienced colleagues available. Your data center team has already been using Beta 92 [Enterprise] to check and archive logs for years. With the current version, you can now also use this software from your workstation to access the archived logs directly.

## Beta 92 [Enterprise]'s functionality

Logs are read into Beta 92 [Enterprise] and simultaneously automatically checked according to your individually specified criteria. You receive an email message if there are any discrepancies. The logs are directly available in an error queue.

The archived logs can then be deleted in the file systems of SAP, UNIX and Windows servers. You no longer have to log onto individual systems to check logs, all the logs are available to you in a central archive. Using search criteria such as date and platform, or via indices, you can quickly and precisely find the information you need.

Beta 92 [Enterprise]'s comprehensive log archiving and searching functionality gives you the advantage of being able to quickly and easily trace, check, and prove system status and production runs. This ensures the security of ongoing operations and keeps you optimally prepared for any legal inquiries.
