

Beta 92

Process History Manager

How you can benefit from Beta 92

- [x] Production security thanks to automated job output analysis
- [x] Improved leverage of production capacities
- [x] Integration with existing environment ensures optimal availability
- [x] Increases economic potential

Increasing Production Security

Significant Cost and Time Savings

Beta 92 provides comprehensive and efficient functions for checking, analyzing and archiving the entire job output. Thanks to near real-time availability and automated evaluation of output information in the data center, you will make significant cost and time savings.

Production Security through Automated Job Output Analysis

Beta 92 scans the entire job output for errors, ensuring smooth of data center production. The comprehensive functionality of this software enables high standards to be met and ensures high production availability.

Save Storage Space, Shorten Access Times

The archiving and data compression technology specially developed by Beta Systems reduces the demand for storage space. Beta 92 ensures that job output is stored cost-effectively, but can be retrieved for current production at short notice.

Saves resources, easier handling

Beta 92's automatic output analysis makes it necessary to print output lists only in exceptional cases.

Highlights

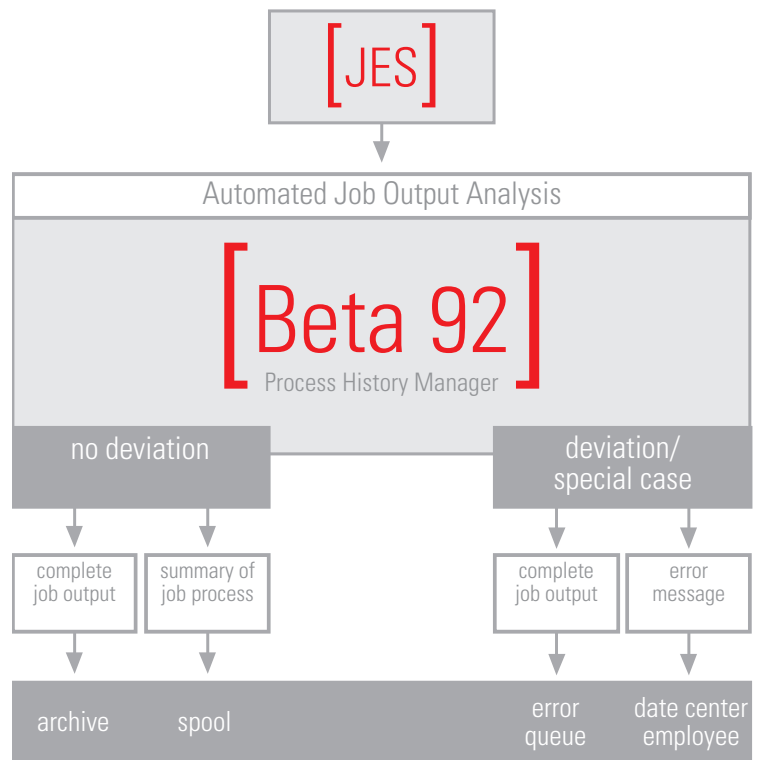

- [x] Displays key information from the job log
- [x] Fast reloads of archived SYSLOGs, JESMSGs, JESJCLs, JESYMSGs and further sysout
- [x] Provides error documentation by storing faulty jobs
- [x] Intelligent search functionality for analysis and auditing
- [x] Saves storage space, reduces the necessity for offline queries

Improved Leverage of Production Capacities

Beta 92 allows you to overcome capacity limitations in the JES system, because the software automatically deletes jobs from the JES spool.

Management by Exception

When monitoring production, job logs are automatically pre-selected, enabling data center staff to concentrate on log discrepancies. Errors are detected in accordance with discrepancy criteria and automatically escalated via email, TSO Send or Tivoli Event. In order to enable rapid access, faulty jobs are stored in an error queue.
